Claim 33. (Currently Amended) A video system for communicating video on twisted pair communication lines having variable inherent propagation delay rates, comprising:

video inputs providing respective components of a color video signal, a first transmitter coupled to a first of said video inputs, comprising:

an input buffer coupled to receive a first of said respective components of the color video signal, and

a differential amplifier coupled to the input buffer and providing a high frequency boost to the first of said respective components, and

an output coupled between the differential amplifier and a first of said communication lines to communicate video component information identifying the first of said respective components to the first of said communication lines, and
a first switch coupled to the twisted pair communication lines to apply said video component information to a selected one of said twisted pair communication lines; and

a second switch communicating with a distal end of said twisted pair communication lines to receive said video component information from said selected one of said twisted pair communication lines,

a delay circuit communicating with said second switch to receive said video component information, and

a monitor output coupled to deliver said video component information to an external video monitor.

Claim 34. (Cancelled).

Claim 41. (Currently Amended) A video system according to claim 34 33.
